

**FEATURE PROJECT**

# **SEABED CPT FOR NEARSHORE MARINE SITE INVESTIGATIONS**

British Columbia, Canada

## CEDAR LNG

ConeTec conducted a site investigation for the Cedar LNG project, a proposed floating LNG facility in Kitimat, British Columbia, Canada, within the traditional territory of the Haisla Nation.

Using a ROSON Seabed CPT unit, ConeTec efficiently profiled soft sediments at deep-water locations, with water depths over 170 meters, delivering data essential for the project's development.

# SCOPE OF WORK

## NEARSHORE MARINE

- In-situ testing and sediment sampling
- Water depths over 170 m
- Seabed CPT's deployed to over 10 m below mudline
- Vibracore sampling to 9 m depths below mudline

# EQUIPMENT

100kN Seabed  
ROSON CPT

Vibracore  
5500

# SUCCESSSES

- HSE incident free
- Completed on time and on budget

BETTER INFORMATION,  
**BETTER DECISIONS**
